

## Technical Specifications & Requirements - Fire Performance

### Duration

- Preparation requires minimum 1 hour

### Space

- If performing outdoors, the minimum size of the stage area that the artist can perform within must be no less than 30 feet width by 20 feet depth, firm and level with a clear safety area of 4m all the way round from the edge of this stage performance area. (Unless stated otherwise) The total being 40 feet by 30 feet. Please note that this is the artists' safety zone and does not include room for the audience.
- If performing indoors, the space dimensions are the same as for outdoors, the area must be well ventilated. It is suggested that smoke alarms and sprinklers be turned OFF for the duration of the performance.

### Considerations

- The performance area must be free of any explosive or flammable material, please check that any curtains and drapes are fire retardant as per industry standard.
- If musical instruments, equipment or anything else is left on stage within the artists' performance space, the artists will not be held responsible for any damage that may occur to the equipment.
- There may be a \*very thin\* residue of fuel left on the stage surface within the artists' performance space. If the surface is \*very smooth\* it may be left slippery and could be hazardous for others to walk on after the show so it may need to be cleaned. A good alternative is to roll out some carpet for the show and then roll it up again afterwards.
- The artists can safely perform on most surfaces excluding, smooth rubber, plastic and some synthetic carpets.

### Lighting

- Not required for actual performance space \*at all\*. The darker the environment, the more effective the show. However, UV lighting adds to the effect.

### Sound

- Sound system required. Music is supplied by the artists on MD or CD, unless agreed otherwise. Mikes are required for drummers.

### Material Requirements

- Fuels and pyrotechnics are sourced and provided by the artists \*except\* in the case where they will be flying in where these materials cannot be taken on board the flight. Please consult with the FIREFLYS.

### Safety Measures

- Fireflys Safety Crew will be present at all fire performance. Fire extinguishers and Fire Blankets will also be provided \*except\* in the case where they will be flying in where these materials cannot be taken on board the flight. Please consult with the FIREFLYS.
